

## ***Installing CAN-8 as a Windows NT/2000 Service***

These instructions assume that the CAN-8 application is operating in the C:\CAN8 folder. If this is not the case please modify these instructions accordingly.

To install CAN-8's Ntserve.exe application as a service these files will be required:

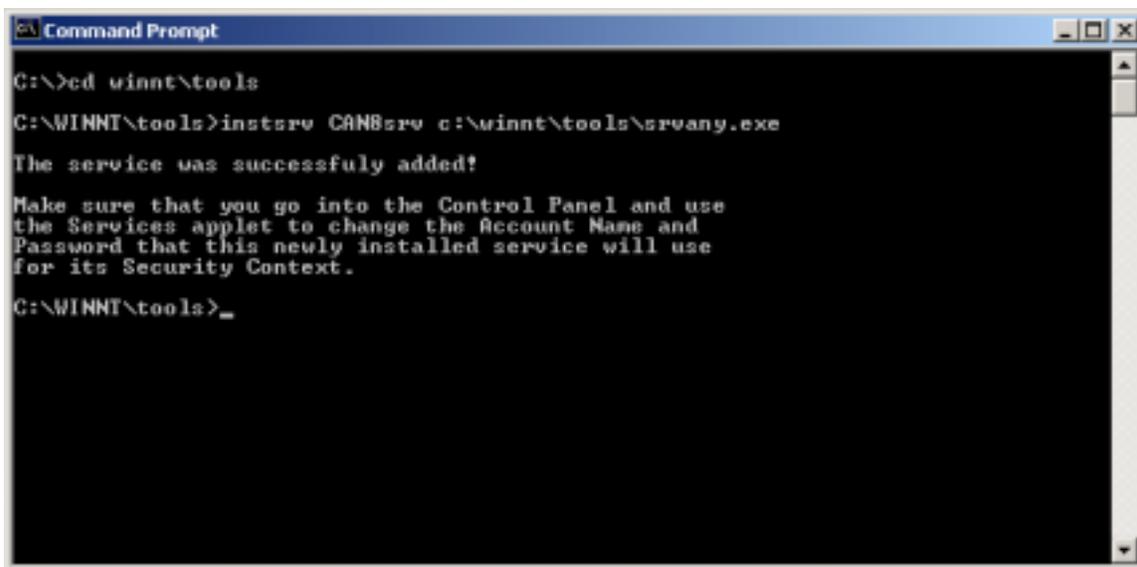

SRVANY.EXE  
INSTSRV.EXE

Create a folder in the c:\winnt folder and call it TOOLS (i.e. c:\winnt\tools) and copy both these files to it.

Start an MS-DOS prompt and change to the folder c:\winnt\tools

Type the following line to create the CAN8srv Service:

```
INSTSRV CAN8srv c:\winnt\tools\srwany.exe
```

```
Command Prompt
C:\>cd winnt\tools
C:\WINNT\tools>instsrv CAN8srv c:\winnt\tools\srwany.exe
The service was successfully added!
Make sure that you go into the Control Panel and use
the Services applet to change the Account Name and
Password that this newly installed service will use
for its Security Context.
C:\WINNT\tools>_
```

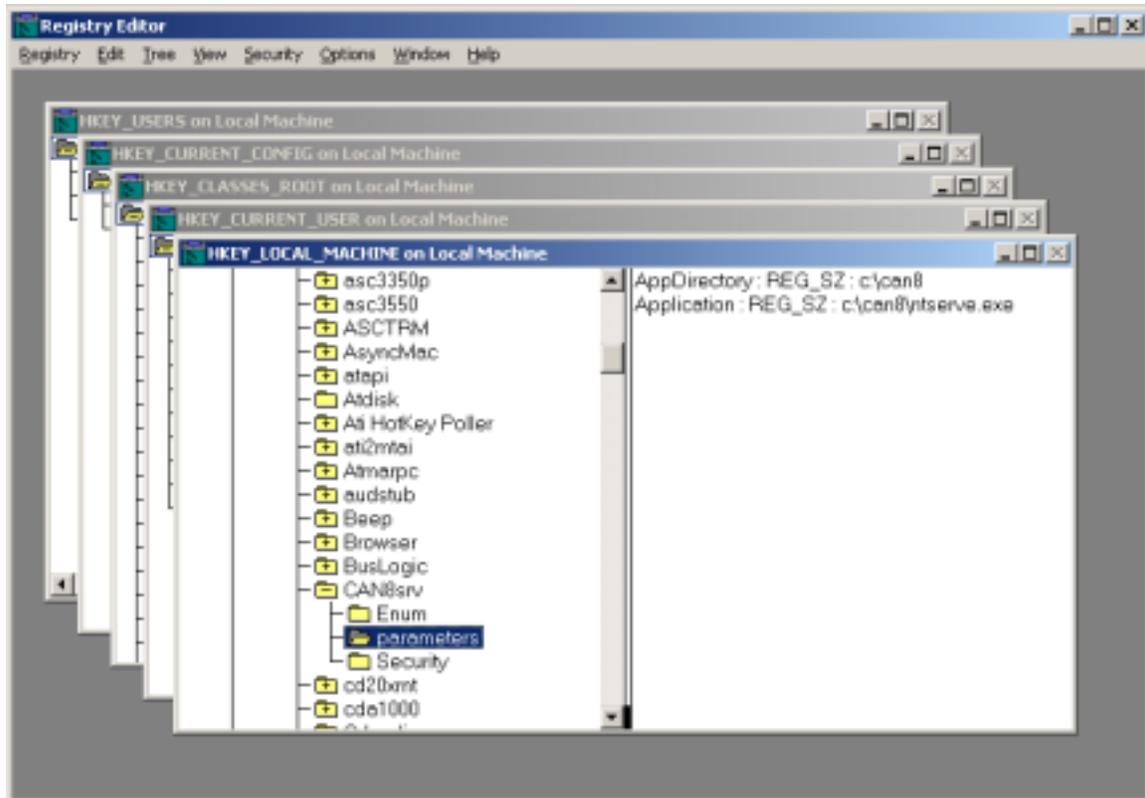

Once Windows NT has reported that the service has been successfully created the parameters will need to be modified:

Exit the MS-DOS prompt and then run the Registry Editor program REGEDT32.EXE

```
START->RUN->REGEDT32.EXE
```

- Under  
KEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Services\CAN8srv:  
create a 'Parameters' key

- Under the 'Parameters' key, create an 'Application' value of type REG\_SZ and specify there the full path of your app executable (including the extension).  
For example: Application: REG\_SZ: C:\CAN8\NTSERVE.exe
- Under the 'Parameters' key, create an 'AppDirectory' value of type REG\_SZ and specify the parameters for your app.  
For Example: AppParameters: REG\_SZ: C:\CAN8

Once the parameters have been successfully modified the service must be started.

### WINDOWS NT:

Open Control Panel -> Services and select the CAN8srv Service to start automatically.

### WINDOWS 2000:

Open Control Panel -> Administrative Tools -> Service and select the CAN8srv to start automatically.
