Singer Start Machine Tutorial

The bobbin holder is in this large removable compartment

These sections will help guide the thread to its destination

Place the bobbin here to thread it

This nob manually controls the needle’s position

Disclaimer: As you move along this tutorial, please make sure all of the little trinkets are accounted for and returned to their proper home.

Thanks :)

If there isn't a bobbin with the thread you need, we're going to have to thread a new bobby first.

Place the spool on the rod at the back right of the machine.

Use the metal pieces to thread the string and wrap it around the screw.

Wrap the thread around the new bobbin and place it onto this nob snuggly.

Then slide the bobbin to the right until it locks into place.

Use the peddle to thread the new bobbin as if you were operating the needle. When finished, unlock the bobbin and remove it.
Carefully slide the bobbin compartment to the left to remove it.

Then open the compartment door to reveal the bobby holder.
Remove the metal trinket in the center and place the bobby inside. It should look something like this.

When you replace the metal trinket make sure it is fully snug into its original spot, otherwise it may cause damage to the machine when operated.
Use the arrow guides on the machine to thread the string until you're ready to insert it through the needle.

P.S. If you are having trouble with this step, please consult the video tutorial provided by the QR code or visit http://tinyurl.com/y2nxk9cf
Thread the string into the needle. This may be difficult at first but keep at it!

Lastly, make sure the light is turned on before you begin operating! We all want you to keep your fingers!

Happy sewing! :)
