

adobe Photoshop TUTORIAL

▶ Adobe Media Encoder CS5	Sep 13, 2010 8:34 AM
▶ Adobe Media Player.app	Sep 13, 2010 8:28 AM
▶ Adobe Photoshop CS5	Sep 13, 2010 8:51 AM
▶ Adobe Reader 9	Sep 10, 2010 4:50 PM

select adobe photoshop from application folder or from the bottom of the screen

photoshop will set up like this

open an image

to open a new image, select file> open

navigate to your image and hit open

CROP image

select crop tool from the tool bar on the left

drag on the image to select the section that you wish to keep

you can adjust the selection by dragging the square on the edge of your selection

Notice: you can press "command +z" at any time to undo changes or choose edit "undo" or "step backwards"

double click on the
selected section to
finish cropping

auto tone, contrast & color

to refine your image,
select image> auto
tone/contrast/color

RESIZE image

RESIZE FOR POWERPOINT

select
image>
image size

for landscape, change
width to 1024 pixels

for portrait, change
height to 768 pixels

RESIZE FOR PRINTER

select image> image size

3. hit ok when you finish

2. change resolution to 300 pixels/inch

1. uncheck the resample image box

RESIZE FOR web

for portrait, change width to 800 pixels

save your project

notice: this will only save as a photoshop (.psd) work file not an image

save as an image

to save your project
as an image, select
file> save as

you can rename and
choose the desired
location and format

when you
finish, hit save

SAVE FOR WEB & DEVICES

to save for web &
devices, select file>
save for web & devices

select save

you can rename and
choose the desired
location and format

when you
finish, hit save
